DETAILED ACTION

Election/Restrictions

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-13, drawn to an optical fiber diffuser, classified in class 385, subclass 123.
- II. Claims 14-20, drawn to a method of manufacturing an optical fiber having light diffusers, classified in class 65, subclass 395.

The inventions are distinct, each from the other because of the following reasons:

Inventions II and I are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case, the optical fiber diffuser of Invention I could be made by a different process, such as (1) heating a glass perform and drawing out a cylindrical core (2) then depositing a cladding layer onto the core. The Invention of group I does not require the particular process steps of independent claims 14 and 20; therefore, the two Inventions are patentably distinct.

Art Unit: 2874

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).
